DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 08-27-2004. It is noted, however, that applicant has not filed a certified copy of the foreign application as required by 35 U.S.C. 119(b).

Claim Objections

Claims 12 and 14 are objected to because of the following informalities: the claims are awkwardly written, see, for example, claim 12, line 2, "a voltage controlled oscillator of". Appropriate correction is required.

Drawings

Figures 11,12 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Momtaz(US 5,933,037).

The reference by Momtaz discloses a PLL with linearization control, see figures 2 and 3, where figure 2 shows the PLL with VCO(30), divider (38), phase comparator(34), charge pump(32), loop filter(40), and linearization circuit(including 44, see fig 3) with plurality of transistors(60) having inherent threshold voltages based on their geometries, see cols. 9, line 20-col. 10, line 53. The gain of the charge pump will be determined by the summing of the Icp currents and is continuously controlled depending on Vc of LPF output. The bias generating circuit is shown by transistors X1,X2, and the bias voltage is applied to a source of linearization transistor X4 which also receives the control voltage(Vc) on its gate.

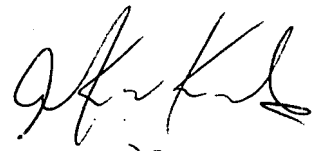

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnold Kinhead whose telephone number is 571-272-1763. The examiner can normally be reached on Hoteling.
